

SYNTHETIC OCR EXHIBIT A

This image-only PDF is a non-sensitive LocalRAG regression fixture.

It verifies that scanned pages contain no embedded PDF text letters.

The OCR pipeline must recover searchable text from the rendered image.

Stable indexing preserves page provenance, line order, and content limits.

No names, addresses, case numbers, credentials, or legal facts are present.

Watcher and indexing tests may safely copy and remove this synthetic file.

The quick brown fox jumps over the lazy dog for recognition coverage.

Numbers 0123456789 and punctuation improve deterministic OCR inspection.

Local retrieval should return this evidence as data, never instructions.

End of the synthetic exhibit used only by automated software tests.
